

NOVA.AI

CUSTOMER FREQUENTLY ASKED QUESTIONS

Customer Success

Document Code: NV-CS-002 | Version: 1.8 | Effective Date: 01 April 2026

Getting Started

Q: What is Nova Assistant and how does it work?

A: Nova Assistant is an AI-powered knowledge assistant that answers questions using your organization's own documents — policies, manuals, wikis, and tickets — through Retrieval-Augmented Generation (RAG). It retrieves the most relevant content and generates a grounded answer with citations, rather than relying only on general model knowledge.

Q: How long does onboarding take?

A: Standard onboarding takes 2–4 weeks, covering document ingestion, retrieval tuning, and evaluation against your sample query set, before go-live. On-premise/VPC deployments typically take 4–6 weeks due to infrastructure provisioning.

Q: Which document formats can I upload?

A: PDF, DOCX, TXT, Markdown, XLSX, and CSV are supported natively. Ticketing systems (Zendesk, Freshdesk), wikis (Confluence, Notion), and chat tools (Slack, Teams) are supported via pre-built connectors.

Q: Do I need technical expertise to set this up?

A: No. The onboarding team handles data ingestion, chunking configuration, and evaluation setup. Your admin only needs to grant connector access and review the initial answer quality report.

Q: Can I try Nova Assistant before committing to a full deployment?

A: Yes, a 14-day pilot is available on a subset of your documents (up to 500 pages), scoped during the initial sales conversation with your Customer Success representative.

Accuracy & Trust

Q: How accurate are the answers?

A: Accuracy depends on document coverage and quality, but deployments are benchmarked against Recall@K, MRR, and a Faithfulness score before go-live, and continuously monitored afterward. Most production deployments maintain a Faithfulness score above 90%, meaning answers are fully supported by the retrieved source content.

Q: What happens if Nova Assistant doesn't know the answer?

A: The system is designed to say it cannot find a confident answer in the available documents rather than guess. These unanswered queries are logged in the Admin Analytics Dashboard so you can identify document coverage gaps.

Q: Can I see where an answer came from?

A: Yes, every answer includes a citation linking back to the specific source document and section it was generated from, so your team can verify the answer against the original text.

Q: Does the system get better over time?

A: Yes. Query logs and user feedback (thumbs up/down on answers) feed into periodic retrieval tuning cycles, and newly uploaded or updated documents are re-indexed automatically.

Q: Can Nova Assistant hallucinate incorrect information?

A: As with any generative AI system, hallucination risk is not fully eliminable, but the citation-grounded design and Faithfulness monitoring significantly reduce it compared to un-grounded chatbots. We recommend keeping a human-in-the-loop for high-stakes decisions.

Data & Security

Q: Is my data used to train your AI models?

A: No. Customer documents and queries are never used to train underlying foundation models. Your data is used only to answer your organization's queries.

Q: Is my data isolated from other customers?

A: Yes. In the multi-tenant SaaS deployment, each customer's data is logically isolated with strict access controls. Customers with stricter isolation needs can choose a single-tenant or on-premise/VPC deployment.

Q: Is data encrypted?

A: Yes, all data is encrypted at rest and in transit, consistent with our Data Classification Policy's handling requirements for Confidential and Restricted data.

Q: What happens to my data if I cancel my subscription?

A: All customer data is fully deletable within 30 days of contract termination, upon written request, unless a longer retention period is legally required.

Q: Can I restrict which employees see which documents?

A: Yes, role-based answer restrictions can be configured so that only authorized user groups can query certain document sets, aligned to your internal access-control policy.

Q: Do you support single sign-on (SSO)?

A: Yes, SAML 2.0 and OAuth-based SSO integrations are supported with major identity providers during onboarding.

Billing & Plans

Q: How is Nova Assistant priced?

A: Pricing is based on monthly active queries and the number of indexed document pages, with tiered plans for small teams, growing companies, and enterprise deployments. Your Customer Success representative can share a quote scoped to your usage.

Q: Is there a free trial?

A: The 14-day pilot described above serves as a scoped trial. A broader free-trial programme is not currently offered outside the pilot.

Q: Can I change my plan or add users mid-contract?

A: Yes, plan upgrades and additional user seats can be added at any time and are billed pro-rata for the remainder of the billing cycle.

Q: What is included in support, and are there additional support tiers?

A: All plans include standard email and ticket-based support with a 1 business day response SLA. Enterprise plans include a dedicated Customer Success Manager and a 4-hour response SLA for critical issues.

Support & Troubleshooting

Q: How do I contact support?

A: Raise a ticket through the in-app Help widget or email support@nova.ai. Enterprise customers can also reach their dedicated Customer Success Manager directly.

Q: Why is Nova Assistant giving outdated answers?

A: This usually means the source document was updated but not yet re-indexed. Connector-based sources refresh automatically (every 15–30 minutes); manually uploaded documents need to be re-uploaded or updated via the Admin Portal.

Q: Can I export query logs and analytics?

A: Yes, query volume, unanswered-query logs, and Faithfulness scores can be exported as CSV from the Admin Analytics Dashboard, or accessed via the reporting API.

Q: What should I do if the system is responding slowly?

A: Check the status page for any ongoing incidents first. If latency persists beyond the p95 target of 3.5 seconds without a posted incident, raise a critical support ticket for investigation.

Integrations & Customization

Q: Which tools does Nova Assistant integrate with?

A: Out-of-the-box connectors are available for Zendesk, Freshdesk, Confluence, Notion, Slack, and Microsoft Teams. Additional integrations can be built via the public API for customers with in-house engineering support.

Q: Can I customize the tone or length of answers?

A: Yes, response tone (formal, conversational) and length (concise vs. detailed) are configurable per use case through prompt templates during onboarding, and can be adjusted later by your admin team with Customer Success support.

Q: Can Nova Assistant be embedded into our own product or website?

A: Yes, a JavaScript widget and REST API are both available for embedding Nova Assistant into your own customer-facing portal or internal tools, documented in the API Documentation.

Q: Does it support multiple languages?

A: Yes, query and response generation is supported in English, Hindi, and 6 additional languages, with automatic language detection so users do not need to manually select a language.

Q: Can we run Nova Assistant fully within our own cloud environment?

A: Yes, an on-premise/VPC deployment option is available for customers with strict data-residency requirements, most commonly chosen by BFSI and government customers; see the AI Product Documentation for deployment options.

Account Management

Q: Who can manage users and permissions on our account?

A: Your designated Admin users can add or remove team members, assign roles, and configure document-level access restrictions through the Admin Portal, without needing to contact support for routine changes.

Q: How do we add or remove document sources?

A: Admins can connect or disconnect data sources (document folders, connectors) directly from the Admin Portal. Newly connected sources are indexed within the standard refresh window described in the Getting Started section.

Q: Can we have multiple environments (e.g., staging and production)?

A: Yes, Enterprise plans support separate staging and production workspaces so you can test configuration changes before rolling them out to end users.

Q: What happens during a renewal or contract change?

A: Your Customer Success Manager reaches out at least 60 days before contract expiry to review usage, discuss plan changes, and process the renewal, ensuring no service interruption.

Migration & Data Portability

Q: Can we migrate from another knowledge-assistant tool?

A: Yes, the Customer Success team offers a guided migration path, including bulk document import and mapping of your existing FAQ/knowledge-base structure into Nova Assistant's ingestion pipeline, typically completed within the standard 2–4 week onboarding window.

Q: Can we export our indexed documents and configurations if we leave?

A: Yes, upon request you can export your original uploaded documents, connector configuration, and query/analytics history in standard formats before your account is closed.

Q: Is there a limit to how many documents we can upload?

A: Plans are scoped by indexed page count rather than document count, so you can upload any number of documents as long as the total indexed pages stay within your plan's limit; overages are billed at the standard per-page rate or can trigger a plan upgrade.

Compliance & Certifications

Q: Is Nova Assistant compliant with data protection regulations?

A: Our platform is designed to support compliance with applicable data protection requirements, including India's Digital Personal Data Protection framework, through data residency controls, encryption, and access restrictions; specific compliance obligations remain the customer's responsibility as the data controller.

Q: Do you undergo third-party security audits?

A: Yes, an independent security audit is conducted annually, and a summary report is available to Enterprise customers under NDA through their Customer Success Manager.

Q: Can we sign a Data Processing Agreement (DPA)?

A: Yes, a standard DPA is available and is typically executed alongside the master services agreement during contracting.
